

An innovative program designed to put more options in the hands of businesses who want to buy IT and Network Solutions from one provider.

The Internet of Things: Altaworx M2M/IoT Control Center Platform powered by **AT&T**

Machine To Machine/IoT is the technology that allows wireless devices to deliver data and event information to a business data center or server.

The Altaworx Difference:

- Management Platform
- White Label & Billing Services
- Jasper Platform to manage sims real-time with alerts
- Instant Activations with Jasper
- Diagnostic Tools
- Usage Analytics
- Custom APN's (AT&T Private Networks)
- Fast Deployment via Altaworx APN and data center
- Design Services - Optimize devices for fast deployment
- API Integration to Jasper for messaging and alerts
- One point of contact for connectivity and management
- No minimum commitment
- Advanced IoT security

AT&T Netbond® Vendors

The block displays the logos of various vendors supported by the platform, including Amazon Web Services, Microsoft, Salesforce, BlueJeans, Box, CSC, VMware, HP, IBM, and SoftLayer.

AT&T Partner Exchange®
Platinum Elite Solution Provider

An innovative program designed to put more options in the hands of businesses who want to buy IT and Network Solutions from one provider.

AT&T Control Center, powered by Jasper, gives customers the foundation to deploy, manage and scale their IoT solutions with nationwide connectivity through the AT&T 4G LTE network. The powerful, cloud-based platform will support their sale of IoT solutions to customers across different verticals.

Rapid Scale

Choose AT&T Control Center and get visibility into the activity of your SIMs on the AT&T network, but more than that, use this proven platform to help you:

- Get to market quickly
- Control costs
- Improve efficiency
- Grow your business

Intelligence

Analyze and control how your devices work in the field, so you can respond immediately to market conditions and customers' needs. AT&T Control Center makes it easy by giving you a unique, real-time view of how your devices are connecting to and using the AT&T network across all points of connection.

Automation

Streamline your business processes and scale faster using a powerful automation engine to programmatically control your devices. Monitor SIMs, usage, rate plans, or other elements of your connected device business and trigger actions to run automatically when critical events occur.

Troubleshoot problems instantly

Run detailed diagnostics on any device, online or in realtime, to:

- Investigate issues when problems arise
- Get access to attributes of any device
- See the data you need via customized views

Gain strategic insight

Get the intelligence you need to manage your connected device business for maximum efficiency. You'll see:

- Lifecycle performance
- Device provisioning status
- Network signaling history
- Connection history
- Events with a timeline view

Integrate quickly with your own applications

Manage your operations more efficiently and control devices directly from your own applications. Use standards-based API messages to access data in the AT&T Control Center. Take advantage of over 100 standards-based APIs to quickly integrate key functionality, including:

- Manage devices
- Change rate plans
- Export billing data
