

## Hosted PBX for Business

Altaworx Hosted PBX (also known as Hosted VoIP) utilizes cloud technology and high quality desk phones to replace out-of-date phone systems. Experience high-definition voice quality, data services, collaboration tools, mobility, contact center functions, along with advanced calling features across all of your business locations.

### How It Works

Hosted PBX is an internet phone system that is managed and monitored through cloud hosting. The convenient system allows for easily managing calls across a single office or multiple locations, even when reaching remote employees or employees on mobile.

### Benefits

#### Cost-Effective

Reduces overall costs associated with maintaining legacy phone systems, and provides predictable annual expenses.

#### Low-maintenance

Cloud-based solution monitored and maintained by Altaworx, eliminates the need for regular maintenance and inefficient upgrades of a legacy phone system.

#### Scalable

Upgrades are immediately available to the system with no need to disassemble or change out equipment.

#### Convenience

Reach employees with a single number, on any device, no matter where the job takes them. Employees can customize individual phones based on their preferences. Other features include: paging, voicemail to email, call recording, conference bridge, hunt groups/call queue, busy lamp fields, auto attendant, and call forwarding.
