Altaworx replaced a Sprint MPLS network with an AT&T AVPN MPLS Solution, AT&T Static Based SD-WAN and Project Managed the deployment of new network

INDUSTRY: Premium Auto Part Manufacturer

The Problem

At the time BBB was purchased, their wide area network was being provided by Sprint. The network design was not sufficient enough to support the growing voice and data needs of the company. All of the locations were being service with bonded T-1's. Altaworx was asked to upgrade the network to fiber and expand the bandwidth at each site. Altaworx also worked with the client to add the business acquired by BBB to the new MPLS network.

The Solution

Altaworx initially installed AT&T AVPN MPLS with fiber optic transport at 11 locations with fiber at the headquarters. Altaworx managed routers were also implemented at each location. Altaworx facilitated onsite hands to connect preprogrammed equipment. Today, Altaworx continues to assist and project manage the client's growth with 14 sites across the US, Canada and Mexico.

Business Impact

Due to meeting the customer's installation deadlines and the ease of implementation, BBB Industries continues to open additional sites across the United States. As the site number grew, bandwidth requirements also grew and Altaworx replaced the lower speed fiber optic circuits with faster access circuits at each site and scaled the fiber at the headquarters to fit the ever-growing network.

Company Profile: BBB Industries was founded in 1987 as a manufacturer of aftermarket auto parts and operates from 14 plants, data centers and sales offices across the US, Canada and Mexico with over 4,500 employees.

Total Billed Revenue: \$62,000 Monthly
